

Overcoming the fear

Exploring Microsoft Fabric from a Power BI Angle

Thank you to our Fabric February Friends!

After this session

Understanding of Fabric

Better understand the Microsoft Fabric ecosystem and its capabilities

Build end-to-end solution

Be able to build an end-to-end solution in Fabric solely based on Power BI knowledge

Identify learning potential

Identify the learning potential and possibilities the launch of Fabric offers you to gain new knowledge

The Fear of Microsoft Fabric

Fabric – the new kid on the block

Unified Data Analytics platform

Data Integration

Data Factory

Data Engineering

Synapse

Data Warehouse

Synapse

Data Science

Synapse

Real Time Analytics

Synapse

Business Intelligence

Power BI

Observability

Data Activator

Unified Serverless Compute

T-SQL | Spark | KQL | Analysis Services

Unified data foundation

OneLake | OneSecurity

UNIFIED

SaaS product experience

Security and governance

Compute and storage

Business model

Overwhelming!

All these new things, new capabilities and workloads in the Power BI Service (look-a-like) interface!

What now? Should I start learning all this new stuff?

New terms that come along

KQL

Lakehouses

Notebooks

Warehouses

Spark

Kusto

What is all of this stuff?
And should I know this?

Closer look at Fabric

Unified data foundation

OneLake | OneSecurity

UNIFIED

SaaS product experience

Security and governance

Compute and storage

Business model

One platform One interface

OneLake

One data lake for the entire organization at scale

One copy of data for use across multiple analytical engines

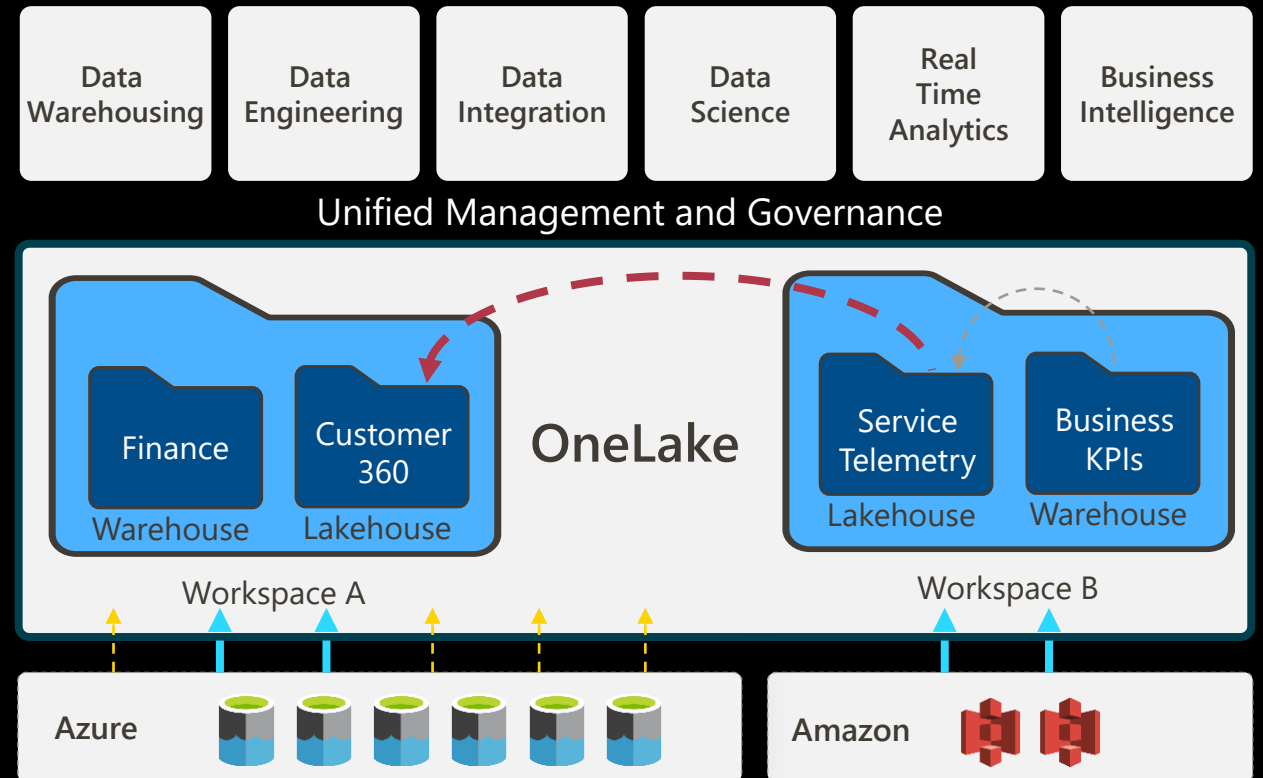

One security model living natively with the data in the lake (coming soon)

A **centralized** OneLake data hub for data discovery and management

Shortcuts to other clouds

Bring data from other storage accounts or even other clouds easily to Fabric without physical data movement.

Fabric services can use this data directly if it is in the right format.

Onedrive for data

OneDrive
for documents

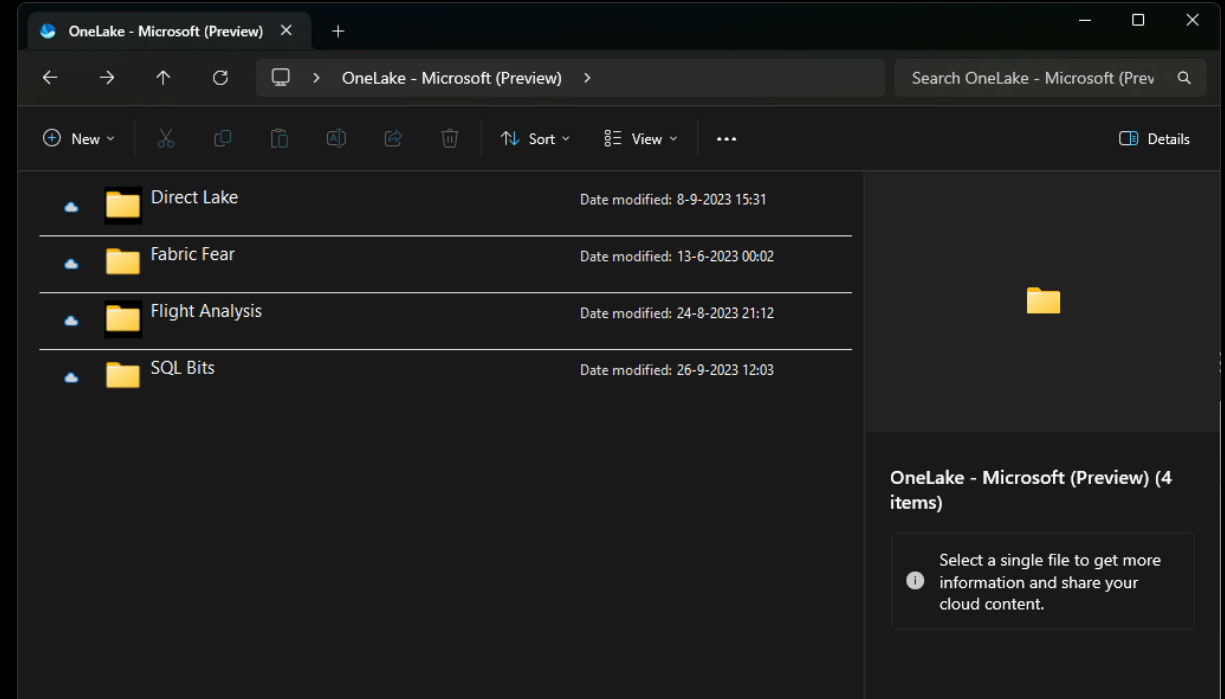

OneLake
for data

OneLake explorer

OneLake is accessible via **Windows Explorer**

(also, data that is stored in other cloud provider through shortcuts)

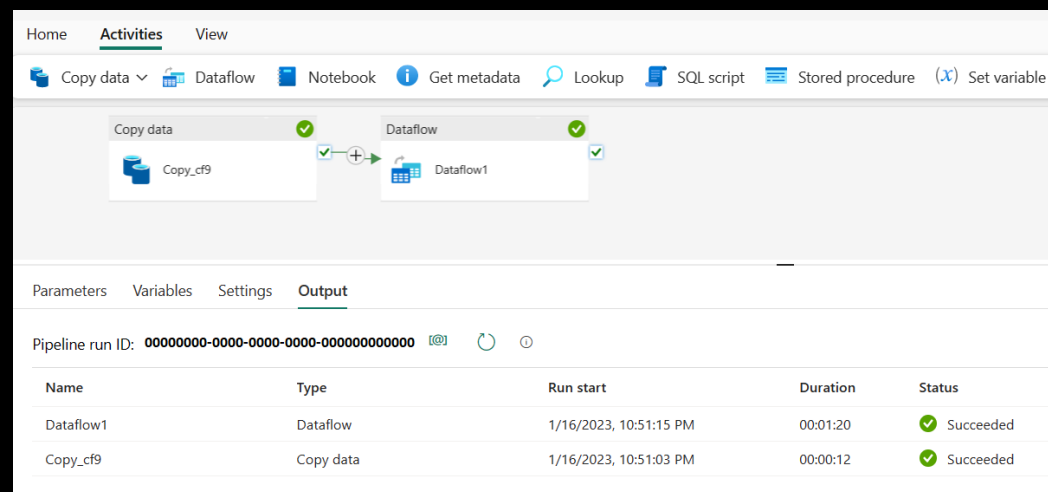

Data Integration

Different options, easy to use.

Variety from

- Dataflow gen2
- Pipelines (ADF)
- Notebooks

Data Engineering

Ability to create lakehouses, run spark jobs and notebooks to collect, store, process and analyze large volumes of data!

Lakehouse

Notebook

Spark Job
Definition ...

Data pipeline

Import notebook

SQL-Endpoint & Data Warehousing

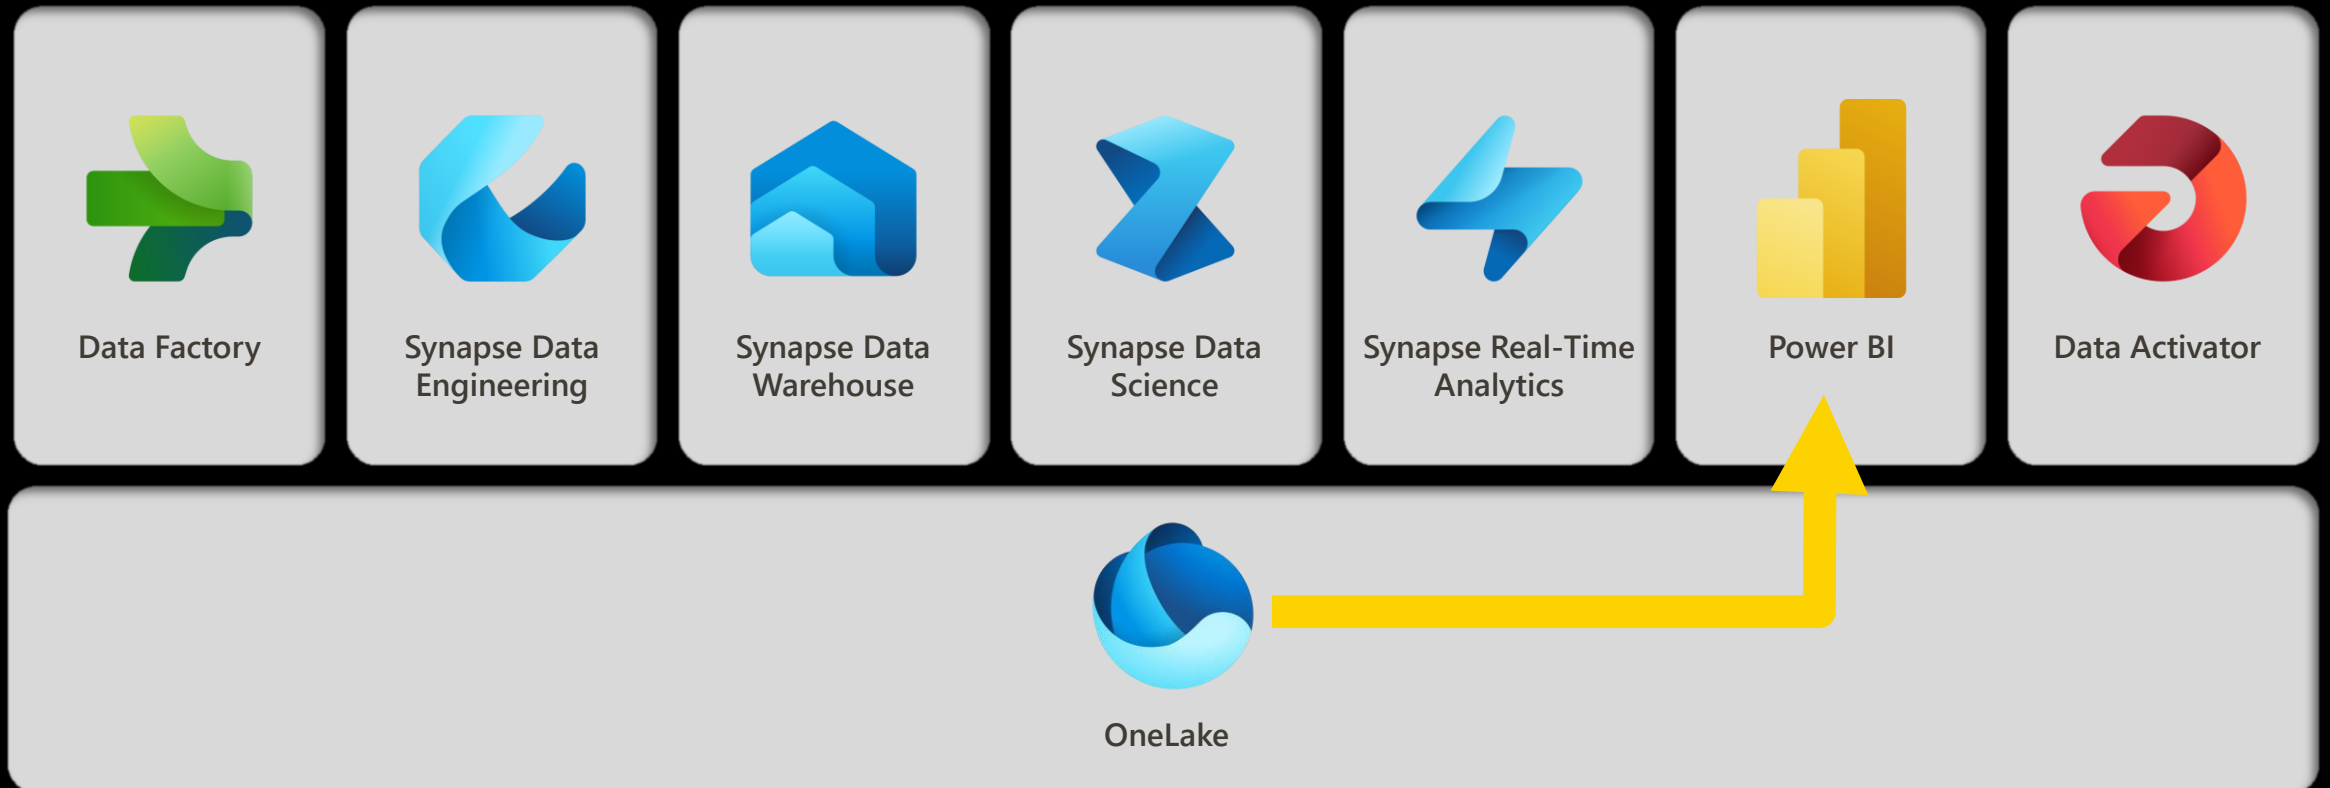

Power BI Datamarts?

Work with data in a table format to build an enterprise grade distribution method to enable T-SQL interaction on top of delta files in OneLake.

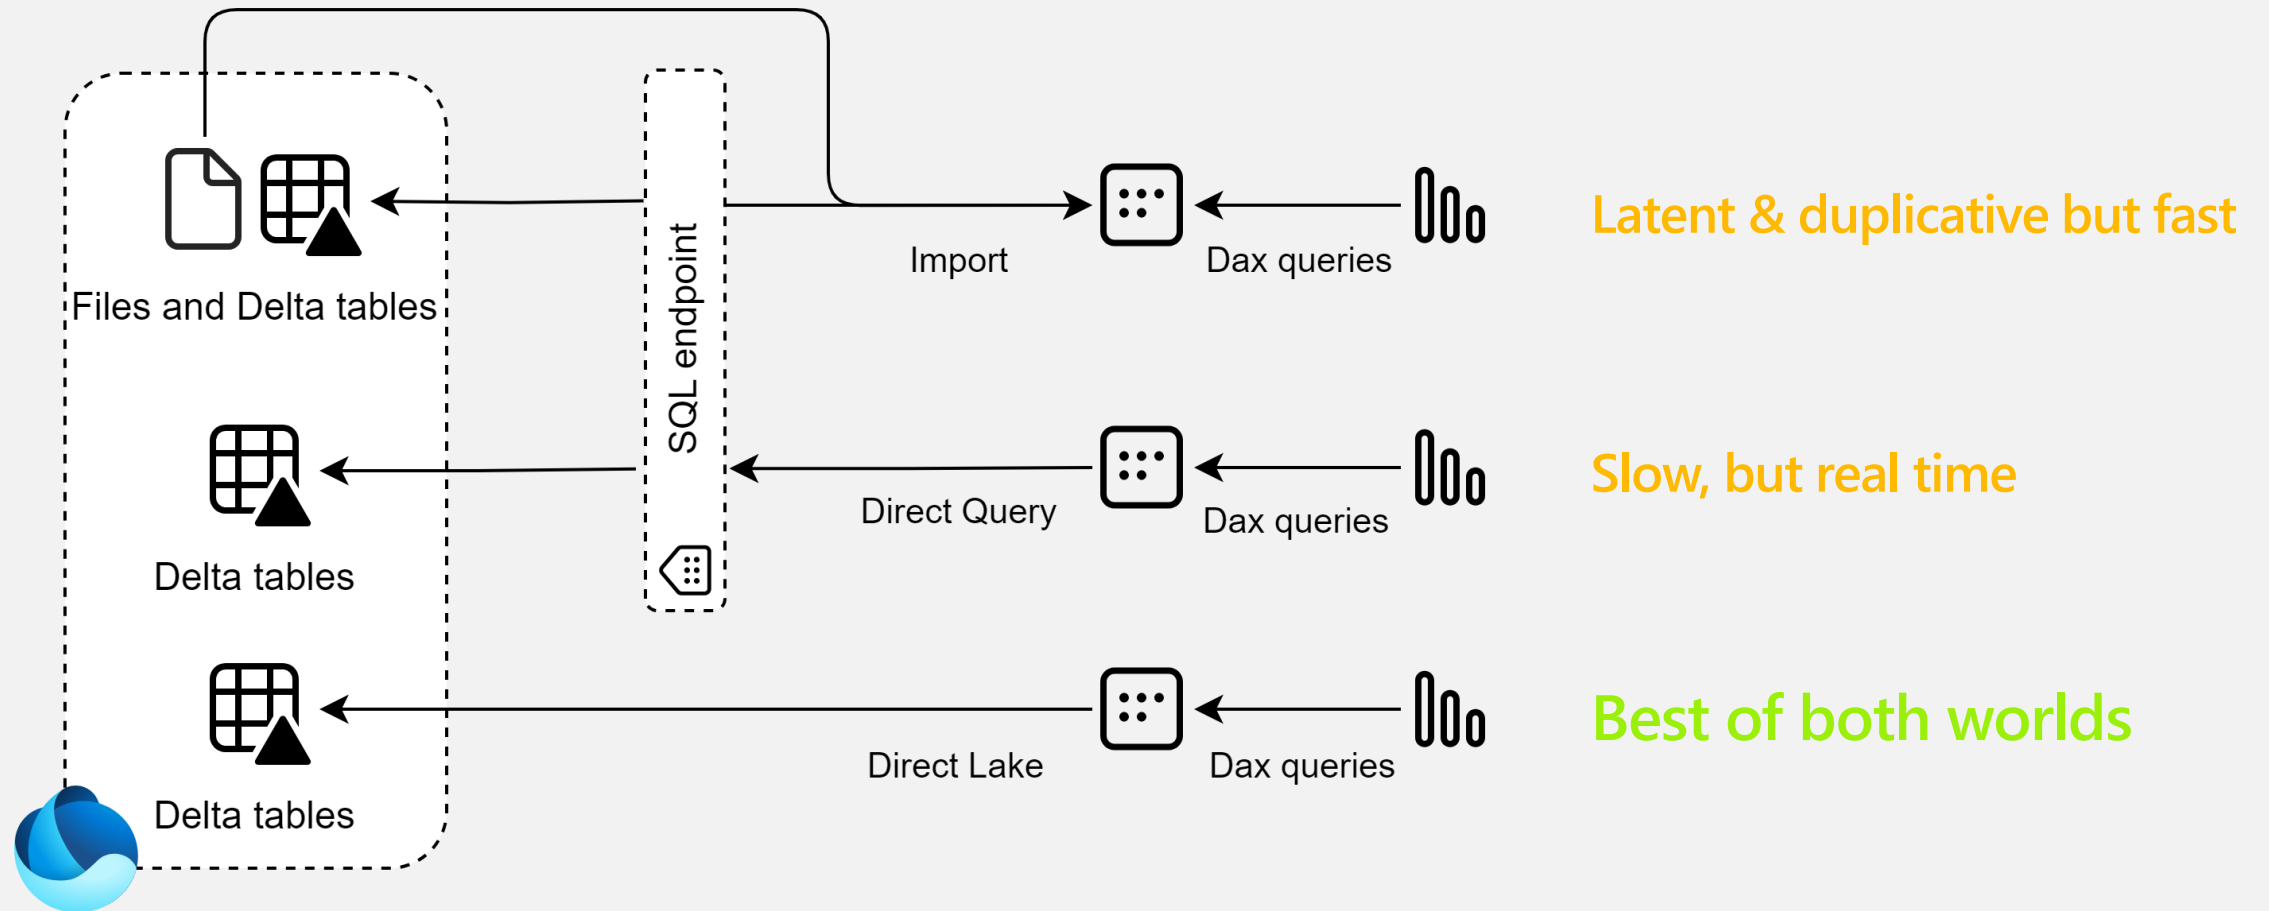

- Stored procedures
- Views

Power BI & Direct Lake mode

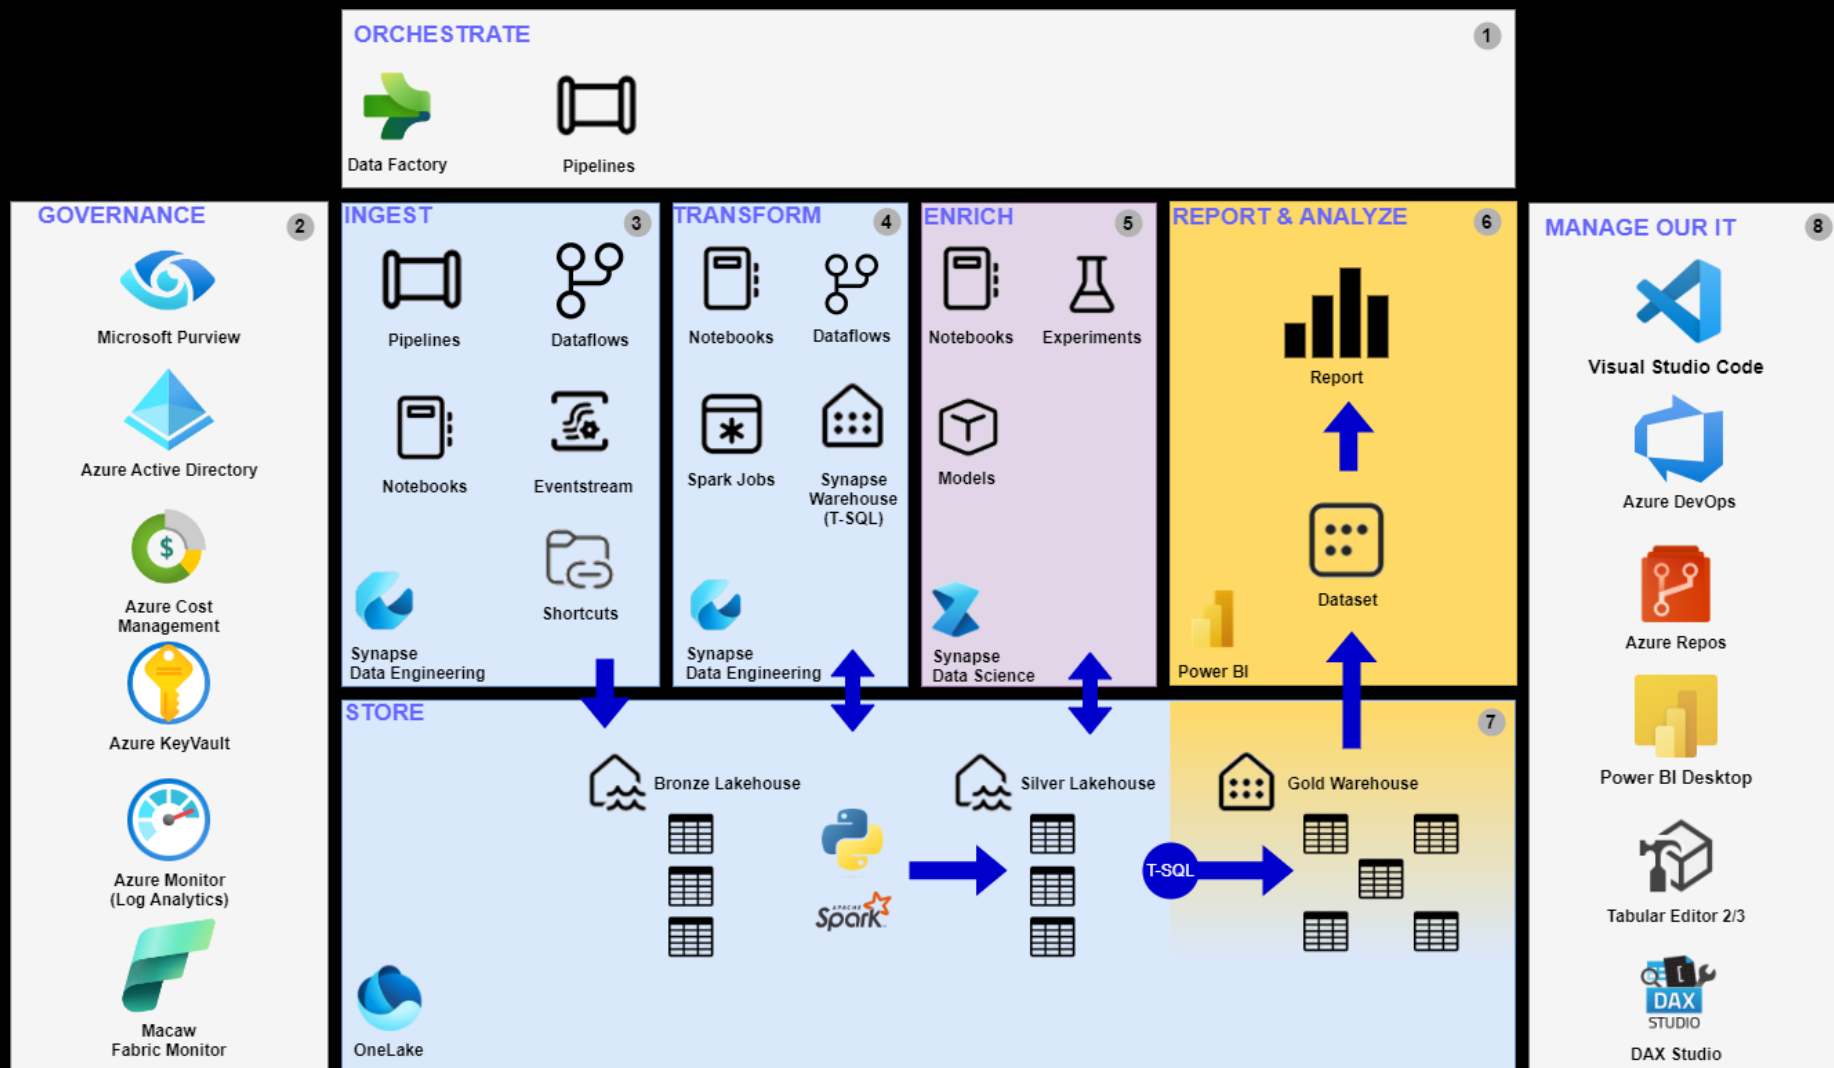

Direct Lake

Let's run some end-to-end examples

What fits in where?

End to end flow

Stages

Ingest	Transform	Model	Visualize
--------	-----------	-------	-----------

Areas ("Experience")

Data Factory	Data Engineering	Warehouse SQL Endpoint	Power BI
--------------	------------------	---------------------------	----------

Artifacts ("Workloads")

Lakehouse (Bronze / Silver / Gold)	Spark	Dataset	Report Paginated Report Metrics
Pipelines	SQL		
Notebooks	Python		
Dataflows (gen2)	Power Query	DAX	

Demo time!

Next steps

As a ~~Power BI Service~~ Fabric Administrator

Microsoft Fabric

Users can create Fabric items

Enabled for a subset of the organization

Users can create Fabric items with new capabilities in Microsoft Fabric. This setting can be managed at both the tenant and the capacity levels. [Learn More](#)

Enabled

Apply to:

The entire organization

Specific security groups

AAD-PBI-Fabric

Enter security groups

Except specific security groups

Delegate setting to other admins

Capacity admins can enable/disable

Apply

Cancel

You're in control of the tenant settings, make sure you put together a security group that can start testing Fabric!

As a ~~Power BI Service~~ Fabric Administrator

Identify (business) ownership for workspaces by categorizing them in Domains.

- Ownership
- Delegation

Domains also works without Fabric enabled.

Admin portal

Domains **New**

Capacity settings

Refresh summary

Domains > Marc's demos

Marc's demos

+ Assign workspaces New subdomain Domain settings

<input type="checkbox"/> Name	Admins
<input type="checkbox"/> Fabric	-
<input type="checkbox"/> Power BI	-
<input type="checkbox"/> Deploy Power BI as Code	-
<input type="checkbox"/> DEMO - Advanced data modeling	Demo User, PbiRefresh
<input type="checkbox"/> Datamarts	Demo User
<input type="checkbox"/> API Refresh	Demo User
<input type="checkbox"/> Hybrid Tables	Demo User
<input type="checkbox"/> Incremental Refresh	Demo User
<input type="checkbox"/> HR Chatbot	Demo User
<input type="checkbox"/> Recover Xmla Edited Dataset	Demo User

More granular levels of controls

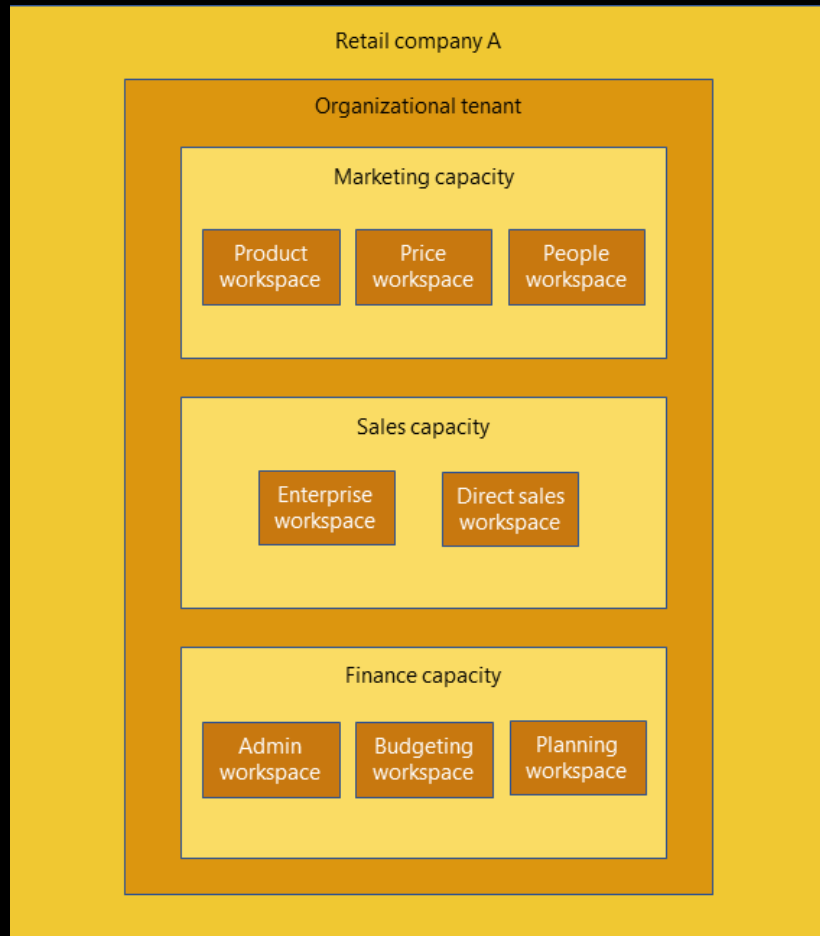

Defines tenant settings and global policies. May delegate certain settings to lower levels.

Defines specific delegated settings for domains / capacities. Assigns workspaces to domains and/or capacities.

Can assign a workspace to a domain or capacity.

Defines workspace permissions and settings on individual artifacts.

Fabric capacities

SKU*	Capacity Units (CU)	Power BI SKU	Power BI v-cores
F2	2	-	0.25
F4	4	-	0.5
F8	8	EM/A1	1
F16	16	EM2/A2	2
F32	32	EM3/A3	4
F64	64	P1/A4	8
F128	128	P2/A5	16
F256	256	P3/A6	32
F512	512	P4/A7	64
F1024	1024	P5/A8	128
F2048	2048	-	256

*SKUs that are smaller than F64 require a Pro license to consume Power BI content.

Wrap up

LET'S
RECAP...

Fabric brings many new **capabilities**

Many of these capabilities are **new for Power BI folks**

Not necessarily, you need to embrace all of this

With Fabric, you build end-to-end solutions with your **existing skill set**

It does open **new learning opportunities** in a familiar interface
